

Manufacturer Response - Do-Over Flow

Response

Please use the attached Tapeout July_04 do-over flow package as the ECO closure guide. The VLSI template has been converted into a board-specific flow covering specification reset, front-end schematic closure, analog/TFLN review, mixed-signal integration, BOM engineering, back-end PCB ECO, physical verification, DFM/DFA, release-output regeneration, and production release approval.

Schematic visibility

- Open 05_schematic_reference/TFLN_AI_NODE_X2_CLEAR_DUAL_NCE_TFLN_SCHEMATIC_OVERVIEW.pdf.
- U1 = NCE-A die.
- U4 = NCE-B die.
- U3 = TFLN_PIC_4xMZM photonic IC.
- U50-U53 = RF driver chain.
- U30-U35 and U40-U45 = HBM groups for the two NCE dies.

Current open engineering items

- KiCad DRC: 32 open violations.
- Unconnected items: 0.
- Schematic parity: 564 open items.
- Final procurement BOM to be signed after ECO/parity closure.
